

Knife Sharpening & Regrinding Services

Most type of knives can be re-sharpened using our machinery located in our factory and where necessary, regrinding of blades can also be carried out (Please note: Regrind service is not in-house).

A completed decontamination certificate and an official purchase order must accompany all knives. Appropriate knife boxes must be used. If a knife is received in an unsuitable container, a box will be supplied and charged to the customer. Customers will be advised if the knife is too badly damaged or worn for economical re-sharpening. Re-sharpened knives are normally dispatched within one week of receipt.
